Growing Instructions

Dwarf Sunflower - Helianthus annus
Sow seeds in a sunny position between April and June 2-3cm deep in the soil and 10-15cm apart. Germination usually takes around 21 days, and when seedlings are large enough to handle should be thinned to 30cm apart. These dwarf varieties will grow to only 30-40cm tall with a spread up to 30cm, and flower in late summer.
